

Safety & Security

Safety & Security

Today's security market wants technology that is modular and scalable. Users shall be able to pick and choose among the options they need. As their needs expand, they want the systems they installed to grow along with it. Bearing this in mind, Teras have developed Safety & Security System that allows total scalability of networked security solutions works for any size business. Teras Safety & Security solution actually combines surveillance and access control systems into one integrated solution.

Aimed at addressing the four key principles of security solutions, i.e. Deter, Delay, Deny and Detect, Teras' Safety & Security System platform grants access control, intrusion detection, video surveillance and communications in one system. Through central command centre, users can leverage a system using various technologies to manage their facilities.

Aside from its flexibility and scalability, our solutions also allows for cross-jurisdictional integration and rapid response, proactive and pre-emptive security response and continuous provision of security services as apposed to the standalone, disparate piecemeal security systems with reactive security responses and intermitted access.

Nazamli Mohd Naza rudin
Head of Safety and Security Solutions

Tel: 03-7880 7871
